

QH742

SOLUTION

Application for cultivator, baler, tractor trailer and other agricultural machinery

I-3

Floatation

The reinforced, flex-resistant sidewall design allows the tires to run smoothly at high speed. Increase the floatation of tires and reduce soil compaction to increase the output.

Cut resistance

The cut-resistant compound brings much more stability to the tire and makes the vehicle and driver always working in the safe status.

Self-cleaning

Smooth lug shape and center line design make significant self-cleaning ability and improve drivability, traction and skidding.
